DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-22, drawn to an intervertebral implant comprising a helical spring, classified in class 623, subclass 17.13.
 - II. Claims 23-45, drawn to a method for delivering an intervertebral implant, classified in class 606, subclass 61.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h).
3. In the instant case the product as claimed can be used in a materially different process of using that product. For example, rather than using a cannula to deliver the intervertebral implant, the implant could be attached (i.e., with pins, screws, or grap) to the end of an instrument, and inserted/released into the intervertebral space. Also, the process for using the product as claimed can be practiced with another materially different product. For example, the materially different product could be a flowable polymer that will cure in place once implanted.
4. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

5. This application contains claims directed to the following patentably distinct species:

Implant

Species A: Figures 1-5

Species B: Figures 6-9

Species C: Figures 17-19

Species D: Figure 20

Species E: Figures 21, 22

Species F: Figures 26-28

Species G: Figures 29-32

Species H: Figures 33-35

Cannula

Species A: Figures 10,11

Species B: Figures 12, 13

Species C: Figures 14-16

Locking surfaces

Species A: Figure 23

Species B: Figure 24

Species C: Figure 25

Implant's outline

Species A: Toroidal

Species B: Cylindrical

Species C: Barrel-shaped

Art Unit: 3738

Species D: Ellipsoidal

The species are independent or distinct because they disclosed patentably distinct structural limitations.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
